

ZDRAVLJENJE Z ZDRAVILI

Obvladovanje simptomov in preprečevanje ponovitve bolezni dosežemo z uporabo zdravil, ki jim pravimo antipsihotiki.

Danes imamo na voljo različne antipsihotike:

- v obliki tablet, ki jih jemljete vsak dan,
- v obliki dolgodelujočih injekcij, ki jih prejimate na štirinajst dni, enkrat na mesec ali štirikrat na leto.

Za blažitev možnih neželenih učinkov in pridruženih simptomov boste morda potrebovali dodatna zdravila.
